WATERPROOFING

Mel-Roll

Flexible, versatile, roll-type waterproofing membrane.

Paragranular

A premium, high swelling, granular, sodium bentonite. When in the presence of water, Paragranular forms an impervious waterproof gel.

Detail Strip

Self-adhering elastomeric tape that provides a simple and quick method of reinforcing joints in waterproofing systems.

Termination Bar

High strength, plastic strip designed to support vertical membrane systems at their termination point.

BEM Waterproofing

One-component, cold-applied, non-slump membrane that can be used for a variety of applications.

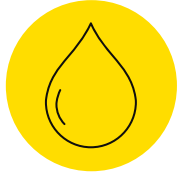

Mel-Prime

Solvent-based, ready-to-use adhesive for membrane systems.

WATERPROOFING

Greenstreak Swellstop

Water-swellable, waterproofing sealant designed for use on many types of poured-in-place and below grade precast concrete applications.

Greenstreak PVC Waterstops

Flexible PVC waterstop for joint waterproofing.

Pointing Mastic

Pre-mixed, cold-applied, polymeric, single-component sealing compound specifically designed to seal terminations

Sealmastic Type 1

Asphalt-based, non-fibered, clay emulsion used to reduce flow or sag.

Sealmastic Type 2

Asphalt-based, clay emulsion with fibers formulated to offer a tight film that combines both excellent strength and resistance to water.

Sealmastic Type 3

Trowel-applied mineral colloid, asphalt emulsion, fibrated with selected fibers and produced in an ideal, light trowel application consistency.
